POTTERY 11.9.95

- 8 Non diagnostic sherd
- 4 Open bowl base fragments
- 2 Fork plate rim fragment
- 2 Orange glaze ceramic bowl fragment
- 1 Large jar rim fragment
- 1 Double glazed brown fragment

From ① (2) sand tools & large wooden blocks were
occasionally found on floor of A. One time an
earthen jar with a lot of a handle for carrying
it out of A.

Sand tools similar to others.

10:30 for ① open to a depth 10 cm.
Opposite glass base from 1 minute ago

T37 Day 2.

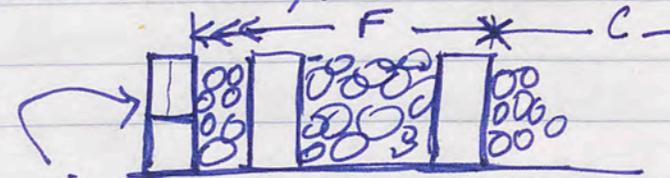

12.9.95.

- Δ ② - Large worked blocks tumble appearing none complete but ordinary pieces of wall. - Working to a depth of 40cm from surface.
 N/E corner ② reveals small stone primitive drawing possibly figure-tagged as [T37F3].

Δ ③ Opened 8.40 to depth of approx. 70 cm. - Small metal frag. [T37F4] - large piece of barrel staves excavated N wash centre. Thickness consistent with other removed earlier.

It is now quite apparent that the North Wall is a secondary wall as expected & consistent with one in adjacent loci/rooms. The wall consists of reuse after stacked metateca n-wash large red stones of stones stacked vertically.

Original
Wall N/S.

From Δ ③ south bank 2 large worked blocks were necessarily lowered into floor of Δ . These blocks are ordinary incomplete & were part of a tumble from organic N wash Δ .

SLOW COING BECAUSE OF RUBBLE

10.30 Δ ④ opened to a depth 110 cms.
 Opalised Glass Bead [T37F5] excavated onto

T37 POTTERY A ④

14/9/95

- 115 Non Diagnostic sherds
- 53 Non-diagnostic bowl (pitched inside) sherds
- 3 ring base sherds 1x large orange pottery
- 2 fish plate fragment.
- 5 amphora handle sherds
- 3 small amphora toe frags
- 1 orange glaze esmin bowl rim
- 2 large vessel pitched rim fragments
- 3 double rimmed jar fragment.
- 1 large bowl frag with thumb pinched pattern

T47.

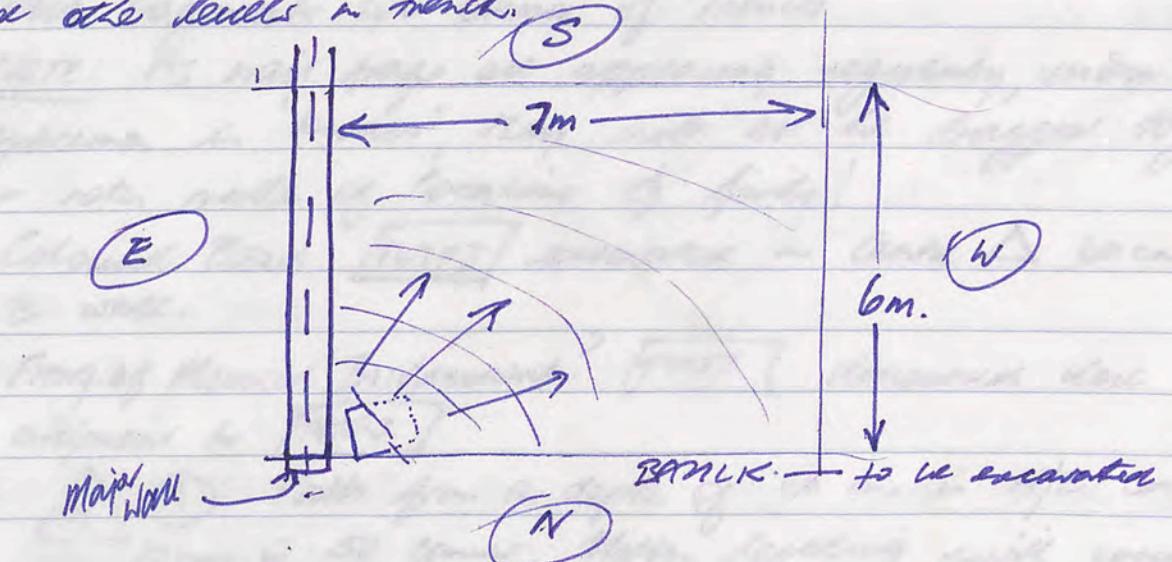

THURSDAY

14/9/95

7m x 6m.

Trench T47 commenced 8:50 AM.

A Entire Trench ① commenced N/E corner approx 60cm
above other levels in trench.

Surface rubble cleared no worked stone. Appears to be uncomplicated trench which is essentially exposing the S most extremity of building.

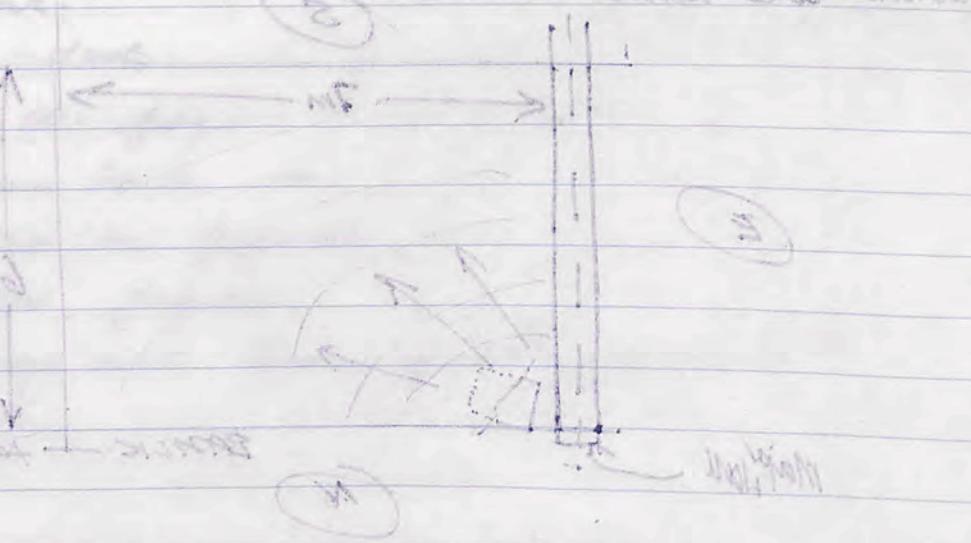

10:30. Workers excavating E/W. eastern wall revealing plaster work (no colour apparent). Floor only 10 cm below surface on S side of trench.

NAIL FRAC [T47.F1] excavated S/E corner of A ① RED/BLACK plaster [F47F2] E wall (major). More plaster indicated along entire E wall - may be necessary to excavate and back-fill. [T47F3] Blue? plaster fragments appearing E wall.

20/10/94

wall 3 passages through likely will [17.00]

T47. ACROPOLIS

16/10/95

8.30 am Continue Δ ①

- Virtually no pottery being excavated.
- Large worked block rests on E wall in N/E corner.
- Nail fragments S/E corner of Trench

NOTE: As nail frags are appearing regularly, unless the specimen is 'kwaei', they will all be bagged together
+ note nature of locations of finds!

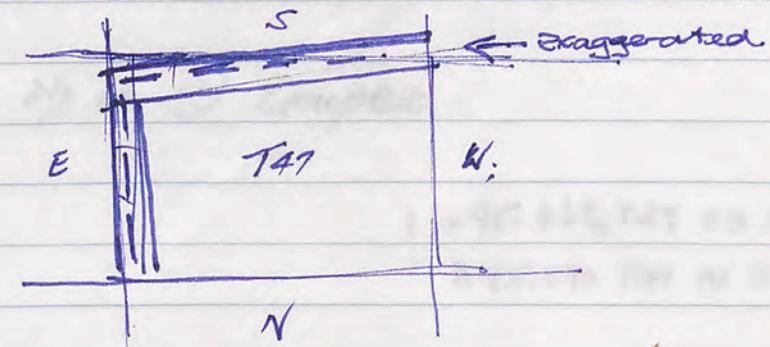

8.45. Coloured Bead [T47F3] excavated in centre Δ 30 cm from E wall.

Frag of Musical Instrument? [T47F3], discovered close to floor
adjacent to [T47F3].

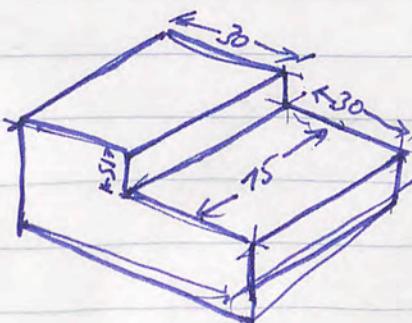

9.40 Δ ① Falls from a depth of 60 cms in N/E corner
to 10 cm in SE corner. Upon leveling will complete
trench with 1 more Δ .

Systematic work happening because of ease of trench!

As excavated happens the S wall is disappearing further
S as work continues W. This is a result of grid pattern
only.

On completion of Day 2 on this trench approximately 25%
of Δ complete (pointing East).

Block removed from N bulk ^{corner} previously
cone extended into adjacent trench.

T47 ACROPOLIS POTTERY

T47 ACROPOLIS

23/9/95

Wind direction good should be a productive day digging-wise!

A (2) Continue towards E plastered wall.
Large uninteresting trenches - very little pottery.
Trench represents approximately 1/6 of large room (S/E quarter).
Nail fragments are appearing on the floor of the trench.

A 2 PT

23/9/95

3 A 2 PT

23/9/95

Walls are being built up with S.

Just edge of wall visible.

Soil very soft.

Clay already present.

Intertwined stones.

23/9/95

Brick back filling & frieze layer (plastered) removed.
No holes which she is in floor. Because that the
plaster will probably have had to be floor
being raised. Further excavation of temple walls may
reveal what plaster was on the wall backfilled.
Floor for excavation seems to be
flat ground only. Top of this part of the
building. No working construction evident in this area.

POTTERY 23/9/95

T47 ACROPOLIS

- 55 non-diagnostic body sherd
 3 rim base coarseware sherd.
 2 double rim coarseware frag
 1 small egyptian bowl rim sherd
 3 fish plate rim sherd (1 coarse & orange glaze)
 1 amphora handle coarseware round sherd
 1 open bowl coarseware body sherd with gorged pattern

POTTERY 25/9/95

T47 A ①

- 12 Non-diagnostic body sherd
 1 Coarseware rim base frag open bowl
 1 Coarseware open bowl rim frag
 1 Coarseware Conguentarium toe frag.

POTTERY 25/9/95

T47 A ①

- 20 Non-diagnostic coarseware body sherd
 2 small Conguentarium toe frags
 2 open bowl coarseware lip frags
 1 coarseware gorged pattern body sherd

T47 ACROPOLIS

24/9/95

- A ② continues now 500 cms from E. plastered wall.
 Samples of loose plaster to be laid out + photographed.
 Weathered coarse due to wind + dust
 Continued cleaning T51 + min return to plaster wall tomorrow.

T47 ACROPOLIS

25/9/95

6.30 Complex array of various coloured plasters appearing. Surface layers (face down cleaned + brushed + photographed). Decided to cease excavation + seek advice of conservator as seemingly there are small intact panels. Coloured samples of plasters already excavated

T47 ACROPOLIS

26/9/95

Returned with conservator to remove samples of red/orange, black and yellow plaster. Decided to back-fill to protect possible plaster wall. Covered in plastic sheeting + then back filled. Samples of edging taken + bagged as T47F10.

27/9/95

During back filling + final floor preparation discovered floor tiles intact still in the floor. Indicates that the plastered wall probably tumbled prior to the floor being rebuilt. Further excavation of rubble ~~soil~~ may therefore reveal plaster intact on the wall backfilled. Future fine excavation recommended.

Also indicates early collapse of this part of the building. (No secondary construction evident in this area)

Proposed

20000m TOT

was actually 3 m deep was about 10 A

3/10/95

TS2 ACROSS

HOBSON - 2000 (4/10/95)

41

Completion of A ③ reveals lots of non-specific charcoal. There is much soft earth (good soil) appearing as we excavate approaching the apparent floor level in adjacent trench to the West.

[TS2 F11] - Figurine Fragment discovered in soft soil layer.

Pottery increasing in number.

[TS2 F12] Rock Pounder lagged - excavated adjacent to above:

Soft earth extending below the level of floor in adjacent trench to W.

Difficult to identify floor - possibly lane cut through. Undoubtedly the rubble from the has damaged it beyond recognition.

Brick blocks were placed back on the rubble wall from whence they possibly came!

Yellow foundation apparent along North wall - was broken at end E (possible door).

RECORDED 8/10/95 SET

A ④ Continues.

2 ions of mortared stone are appearing on the S side of N wall (possibly indicating external wall as in other parts of the Acropolis. ~~surrounding pottery was only used~~

As no floor has appeared + trench is now about 30-40 cm below floor in adjacent trench new excavations will continue to yield. Hopefully this will explain nature of all walls especially the East.

Large patches of excavation across floor of trench.

Major wall

Short dry lots of walls

± Moderate formal external wall or no wall section of E. surviving.

A ③ Depth in the trench was down to more than
against surface and 1.5 m in H. (plus as yet)

8.15 m. Still continuing eastwards towards the presumed N-S exterior wall, at a level still not on flat but below the original floor.

By judge by the ledge at the top of the course of masonry above,
a little pottery is coming up, but not in quantity; the soil
continues to be dusty brown, darker than the usual wind-blown
dust.

8.05 The N-S wall is emerging by the apparent break in this major
wall. It should be cleared on its west side by the end of the
morning where a presumed doorway appears to be in the N wall.
Subsequent foundation stones are beginning to emerge parallel with
the stone gutter to the N.

10.15 A fragment shows at a distance a red lotus (suggesting secondary
use of the wall) also showing where the N-S wall appears to have a
break. Found out of the side of a mass piece of bronze (part of a ring?)
broken off the west. A second potter's wheel base also found adjacent to

B D is East of the Eastern extension wall to a depth of 20-30cm.
 At this stage it is intended that A will only be wide enough to allow workers safe access to the foundation trench - not to be string line as time will not permit.

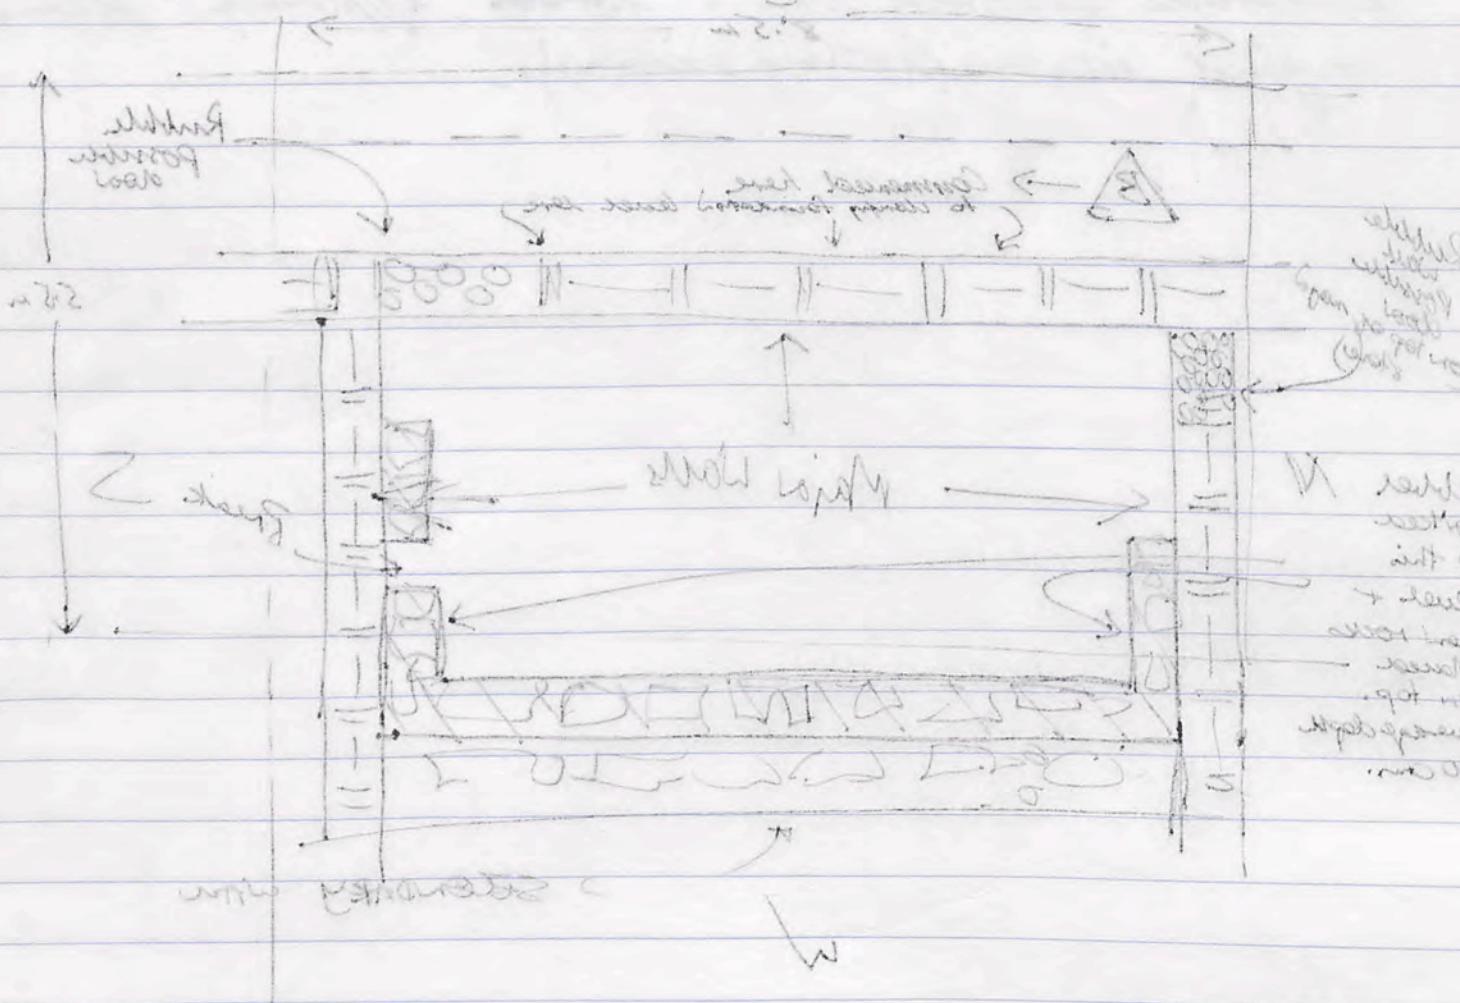

DRAFT

ARCHAEOLOGY

as J. Milgum's remains reported general A. M. C. S.

at little trench met all to foot of C. A. M. C. S.
which at this time A. M. C. S. was with the
excavated all were yet when built up
having no such work as had found it or for - there

752 ACROPOLIS

17/10/95

B ① Continues

large pristine worked building blocks are being excavated E of the East wall. The work is now because of the size and number of blocks. Size of blocks is consistent with all Acropolis building (major) blocks. Wall which is apparent down to 40m is 'outer' foundations type. Soil is brown & free. Virtually no pottery

large blocks 35x110x57cm. appearing & being removed to E bank

B ① Continue to a depth of 1 metre

Entire width of trench not excavated as it is now obvious that the wall is external. Width of trench is determined by width of TURKEY HALAF!

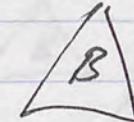

Very slow day. No special answer leads to make progress later?

[TURKEY HALAF] long bag (top) seems to be of frame
construction.

Ability to determine if this is a bag or not is good
of the case as the case says - but provide!

TS2 ACROPOLIS

18/10/95

 ② is commenced - will complete the trench
8.5 x 1.5 m (approx) on E side of external E wall
much rubble mixed with pristine stones. Unusual angles
and gaps in S major wall indicating subsidence or
seismic activity. Ground level was not a
'quintessential' wall.

Jebel reached at N end of trench fading gradually
away to south (consistent with yellow flag on A).

As the worked stones occupying the S 50% of the
trench are so large + so lodged it will be unlikely
that time will permit their removal. Do not wish
to break stone as they are pristine!... Cinta jaya!

Very nice day. Mr Guasme's absence tends to make
people 'relax'!

[TB2F17.] Lamp base (tip) excavated base of trench
corner.

unable to determine if this is a door at the S end
of the wall at this early stage - but possible!

TOP/01/81

LUDWIGA SET

most all pottery from 2 excavations is ①
from S. section to site 3 is (rough) m 2.1 x 2.8

large amount with some thin broken pieces
is relatively pristine. Most from 2 is very fine
in the form and unique but (pottery) mostly

pottery pottery which is not the normal stuff
A lot with very thin (thin) pieces of pottery

all of 800 2 all pottery mostly broken all of
pottery at site 3 is mostly m + good in the form
from the 2. However will mainly from site 2.
Very thin! Broken and well as most want to

where it does contains (mostly) well with m
"well" pottery

want to add extensive (m) pottery

site 2 all the pottery is a bit to immature to identify
but - quite good but the same as to

TS2 ACROPOLIS

19/10/81

③ Will only be 80% complete. (Northern End.)

North end of trench cleared to depth 50%
to clarify external wall.

Inspected rubble filled doorways in E end of North
wall and S end of E wall not verified - not enough time!
Suggest next year that trench is broadened + huge blocks
removed as part of completion.

External wall verified! No pottery + very stony soil.
Major blocks still in place have all deteriorated on the
Eastern exposure. All/Most of the rubble has gone east
and it appears as this has happened early and then
covered by soil + subsequent rubble wall / secondary
occupation deterioration
