Trenches... DQ, 28, St. 4, St. 11, St. 17.... Sta. 01 South.....

Dates.....

#### ADVICE to TRENCH SUPERVISORS

1. Take a new page for each day. (Each day may take several pages).
2. Draw a **scale plan** of the trench **each day** on the graph paper (essential), with North at the top (if this is not convenient, mark North direction clearly).  
Mark depth from surface at the beginning of each day, at designated points.  
When starting a square, this plan may be nearly empty but draw it all the same and mark in emerging tumble.
3. Draw arrows on your plan to indicate **direction** in which you are excavating.
4. Every time you designate a new context, (on the occasion of a new spit, a new feature, a new soil colour) fill in the **Context Record Sheet** for that trench, as well as describing it in your report. Store the accumulated context record sheets in the plastic sleeve in your record book.
5. **Structures** . Measure carefully any structure (wall, doorway, threshold, ovens, pit, any large dressed stones or columns) and record exact location, height, width in your report as well as on the scale plan.
6. **Floors** - marked by very hard tough surface or layer of white crushed limestone. May be softer adjacent to wall. Record thickness of floor, if we decide to dig through it.  
If your floor is particularly good, collect a few bags of surface material - there may be seeds.
7. **Objects**. e.g. glass, figurine or lamp fragments, metal, stucco, loomweights, spindle whorls, beads, graffito-ed sherds, coins, gold jewellery ( some hope). Mark in the location and depth of any objects clearly and accurately. If necessary, draw another sketch plan as the day progresses. A quick sketch of the object in the report would be helpful, if it is too mysterious to name e.g. Mattie's metal blobs.
8. **Pottery:** label bags clearly in waterproof pen, with one label inside the bag and one outside. **Record daily the number of bags per context** . Be very careful to separate pottery from different contexts.  
**It is absolutely essential to double-bag the pottery. A broken bag of pottery without context is useless.**
9. **Bone:** Collect all bone and label as for pottery. Record number of bags per context daily.
10. **Charcoal:** Collect all charcoal and label as for pottery. Record number of bags per context daily.
11. **Tile:** it is important to record the location and amount of tile.
12. **Very important:** at the completion of a trench, draw to scale:
  - i Draw a section of the exposed baulk, with details of stratigraphy clearly marked.
  - ii Draw a top plan of the completed trench, with contexts clearly marked.
  - iii Write a short summary with your interpretation of the trench.

## List of equipment for Trench Supervisors

- Dig bag
- Water
- Clip board and spare clips for windy days
- Pens (water proof only - black or blue), pencils, ruler, eraser
- Measuring tape
- Plumb bob
- String
- Spirit level (may be shared)
- Supply of labels
- Supply of different-sized plastic bags
- Toilet paper (for wrapping delicate objects as well as for personal use!)
- Small cartons/boxes for objects. When available
- Bandaids and aspirin for the vapours (yours or the workers')

Context	Report
	Trench is split between 2 levels; 2 previously dug floors. The high floor is Locus 1. The low floor is Locus 2. lots of loose soil, small rocks & weeds being removed from both loci.
c1	Quite flat after top soil removed
c2	Includes the slope b/w 2 loci, so is very uneven after topsoil was removed.
c2	Clearing to south wall. Very loose soil. Wall crumbling unusable; previously undercut. Lots of pottery being found, mostly large wares. Small patch of blackish soil near doorway (b) & - also very dark patch @ (a). Lots of bone fragments, some fit together. Still lots of pottery. Black patch @ (b) quite substantial now.
a	▲ nail found.
c2	Lots of bone fragments; some quite large.
c2	Clearing north side to create straight cut b/w loci 1 & 2. - removing some big stones. Not much pottery. Soil colour rich. F1 - broken pot found, covered/enclosed in black soil!
c2	Rough back created between loci Photos taken of F1 (pot) & rocks near entrance(may be part of door way, ex situ).

Photographs:

Context	Report
L1.1	Cleaning floor, first spit. Ground damp from night rain. Underneath, dry, grey brown soil. Some pottery - one big green glaze piece - most pottery on east side. Soil very loose, not very rocky - about A bit of tone.
L2	F1 - possible oven with partial pot - measured at 27+30cm - level taken at - 101.859
L2	Stone A, previously thought to be part of the clear structure, is now identified as the matching part to another stone in Area 27, adjoining. The stones (A) been relocated to Area 27.
L1.1	Green glaze actually doesn't really look green. Think it's just burnt = Box
L1.1 A	Found complete round pottery object. 3 small holes in rim. - LAMP, small.
L2	New spit -
L2	Stones A, C removed. Large rusty patch found & flagged from underneath.
L2.2	Stones in wall noted to have holes made in them.

Context	Report
	levels taken for both loci at *1 & *2. consecutively they were 3.01.755 & 4.02.114.
1.3	New spit in locus 1.
*1.3	Red plaster found. Very small piece, at level of locus 2 measurement above. Spit progressing quickly because lots of fair sized stones (~25cm), and larger, being removed.
*1.3	Red plaster found
*1.3	More red plaster - larger piece
*1.3	Charcoal, lots of crumbly bits dotted through soil -
*1.3	Charcoal, more sparse but still in tiny bits.
*1.3	Plaster, orangey/yellow in colour. One piece only.
*1.3	Red plaster found. Appears that north wall was plastered as all pieces are in close proximity
1.3	A ring of rocks has appeared (or semi-circle rather) against the North wall. Unfortunately it's not complete. I'm hoping the rocks that are missing were not in situ before they started digging.

Photographs:

Context	Report
1.6	<p>Started new spit. Not much pottery emerging    Very large stones emerging - 30-40 cm    The central wall, running S/N is looking like    a very well constructed wall, many large, flat    stones used! Still yet to reach a floor and    still clearing rubble. Therefore it has been    suggested that locus 2 may actually be    part of a courtyard (??). The room (courtyard (?))    appears to continue into 2 other trenches. ok - not a    courtyard! (even found in adjoining trench!) Plus it    would have been much too small!</p>
1.2	<p>Bedrock has been reached in 12. The level has    been cut away to the shape of the room so    as to form a base for the existing walls. Therefore    it is probable that there once existed a floor at    this level. There was no sign of a floor though.    Still</p>
1.1	<p>Digging down to find full bedrock base.    Soil still covering bedrock has taken a reddish color    Soil - still large rocks but no pottery or bone</p>

Context	Report
FINAL OVERVIEW	<p>Trench is completed. Split by a central wall running NS. L2 showed evidence of 2 floors, <sup>(one)</sup> resurfaced and was later split to create a new locus (L4). L4 gave another floor (very rough cut hard) which holds a pit 38cm deep - to jebel. South of the pit in L4 has been excavated to jebel, north of the pit remains at the <sup>2nd</sup> floor level.</p> <p>L1 has been left at the 1st floor level &amp; L3 was created to dig further down. We encountered another floor level just below the first, of which a small section was left, and a third level, which is no longer there. Just below this 3rd floor was stepped jebel, descending in 3 stages to eventually form a stairs were approx 50x70cm in size, with its base being bedrock. See pg 26a for details of L3. There is a double wall running E/W across the North of the trench. This is possibly due to the steep slope causing a need for reinforcement, or it may mark the Northern boundary of this complex.</p>

 0478.

Context Report

l.1 After cleaning of TII, team moved to new trench T16, clearing topsoil.  
 The square is rather badly eroded to the north so the double wall E/W seen in adjacent TII may have collapsed here - or is it a roccor pit levels taken.  
 As yet, no clear wall lines emerging.

A considerable depth of soil, as expected, in the sunken section to north. Still no clear wall lines, but we should expect some continuation of the walls in TII.

Context	Report
FINAL excavation	<p>THE completed trench showed a relatively simple structure of a room, with one wall running NS ±70cm from the East trench boundary. Another wall, which continues from TH to the west, runs E/W along the North of the trench. This wall appears to have been a double wall, indicating a possible boundary wall, or simply reinforcement considering the gradient of the slope. Although the Eastern part of the wall is clear, the West is considerably collapsed i.e. just looks like tumble. One floor level was found, on bedrock. Sitting on the floor, approx. 64-75 cm from the West boundary of the trench, a NS line of rocks appeared. Although the single rock level indicates it was not a 'wall' as such, its straight and consistent structure suggests it was a deliberate construction i.e. it has been left in situ.</p>

Context	Report
FINAL excavated	This trench was very difficult to work because of the intrusive nature of many large stones. Although it took some time, a small amount of pottery was collected and we reached a floor in the East side of the trench (1.7/2.1). The west side, later 3.1, was not excavated to this floor level but left higher on account of the stones. One wall intersected the trench, running E/W along the North. This wall continues from the trenches to the west and in those trenches it is evident as a dense wall. In T17 however, the North section of this wall was badly damaged, possibly due to a robber trench.
