Name..... HEATHER JACKSON, BOOK 2, 2006.....
Trenches..... AREA S: 7, 13, BIK 7/13.....
DQ: 96, 99/98, 99, 13, 16, 86, 94, 3, 14, 84, 91.....
Dates..... 17/5/06 - 2/6/06.....

ADVICE to TRENCH SUPERVISORS

1. Take a **new page** for each day. (Each day may take several pages).
2. Draw a **scale plan** of the trench **each day** on the graph paper (essential), with North at the top (if this is not convenient, mark North direction clearly).
Mark depth from surface at the beginning of each day, at designated points.
When starting a square, this plan may be nearly empty but draw it all the same and mark in emerging tumble.
3. Draw arrows on your plan to indicate **direction** in which you are excavating.
4. Every time you designate a new context, (on the occasion of a new spit, a new feature, a new soil colour) fill in the **Context Record Sheet** for that trench, as well as describing it in your report. Store the accumulated context record sheets in the plastic sleeve in your record book.
5. **Structures** . Measure carefully any structure (wall, doorway, threshold, ovens, pit, any large dressed stones or columns) and record exact location, height, width in your report as well as on the scale plan.
6. **Floors** - marked by very hard tough surface or layer of white crushed limestone. May be softer adjacent to wall. Record thickness of floor, if we decide to dig through it.
If your floor is particularly good, collect a few bags of surface material - there may be seeds.
7. **Objects**. e.g. glass, figurine or lamp fragments, metal, stucco, loomweights, spindle whorls, beads, graffito-ed sherds, coins, gold jewellery (some hope). Mark in the location and depth of any objects clearly and accurately. If necessary, draw another sketch plan as the day progresses. A quick sketch of the object in the report would be helpful, if it is too mysterious to name e.g. Mattie's metal blobs.
8. **Pottery**: label bags clearly in waterproof pen, with one label inside the bag and one outside. **Record daily the number of bags per context** . Be very careful to separate pottery from different contexts.
It is absolutely essential to double-bag the pottery. A broken bag of pottery without context is useless.
9. **Bone**: Collect all bone and label as for pottery. Record number of bags per context daily.
10. **Charcoal**: Collect all charcoal and label as for pottery. Record number of bags per context daily.
11. **Tile**: it is important to record the location and amount of tile.
12. **Very important**: at the completion of a trench, draw to scale:
 - i Draw a section of the exposed baulk, with details of stratigraphy clearly marked.
 - ii Draw a top plan of the completed trench, with contexts clearly marked.
 - iii Write a short summary with your interpretation of the trench.

- Dig bag
- Water
- Clip board and spare clips for windy days
- Pens (water proof only - black or blue), pencils, ruler, eraser
- Measuring tape
- Plumb bob
- String
- Spirit level (may be shared)
- Supply of labels
- Supply of different-sized plastic bags
- Toilet paper (for wrapping delicate objects as well as for personal use!)
- Small cartons/boxes for objects. When available
- Band-aids and aspirin for the vapours (yours or the workers')

Context	Report
1.9	Continuing this spit, now that NP has departed. Tough reddish soil indicates remains of bedrock but not yet reached. A line of stones N/S, roughly in line with wall C, has been left in place. Both walls A & B rested on upper floor surface. <u>No structures associated with lower floor surface.</u>
1.10.	Below 1.9 west of possible wall. Soil still very red and tough. Hardly any pottery. Another floor line level with top of wall, seen in bank under E/W wall. The new wall (D) N/S now much clearer - it is <u>very</u> wide at 70 cm ² - no, that is not so except certainly a primary wall. Now on bedrock
1.11	Now excavating small area east of primary wall D, which is <u>not</u> in line with wall C. Reached bedrock at depth

of 155 cm. from TBM
upper floor 15 cm above lower floor
Lower " ① 50 " " bedrock.
Line seen in baulk between lower floor ①
and bedrock ② 15 cm below.

FINAL 20/5/06

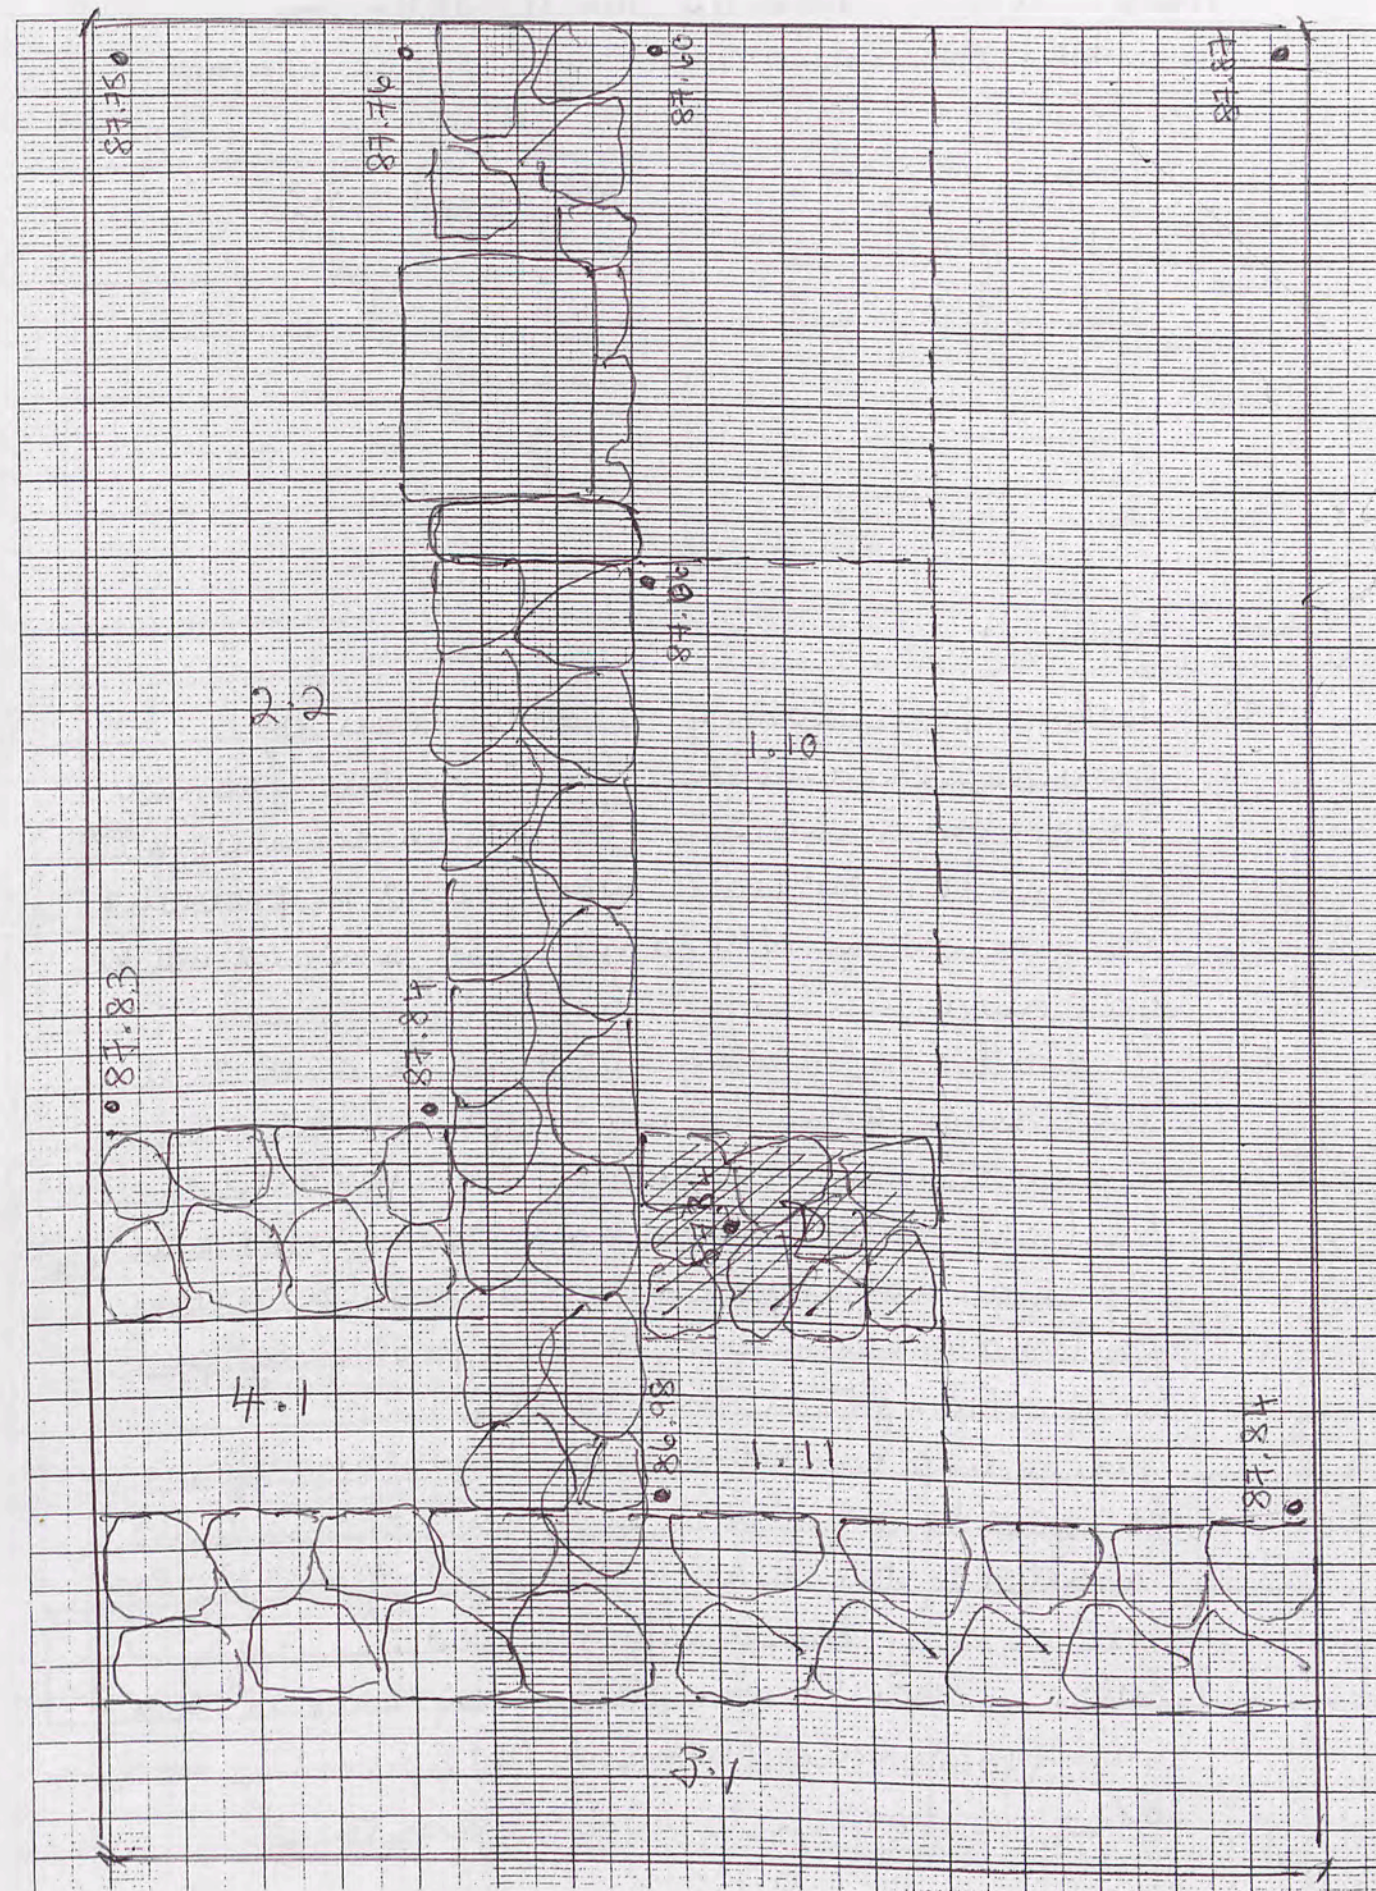

Context	Report
1.11	Finishing this small area east of primary wall. E/W (wall D) - will excavate to bedrock, then clean primary wall.
2.2	Below 2.1 in locus south of main E/W wall. Will take this to a floor, then decide whether to go further
*1	glass frag in loose soil
*2	iron frag near door in loose soil.
1.11	Completed to bedrock (see levels on plan). Little pottery
2.2	Continuing work on 2.2, which consists of loose brown soil, little tumble. Will continue to find floor at base of door.
2.3	One more spit below 2.2. Character has not changed but this surely must be near the floor.
	Will clean for Final Photo on Saturday 20th - today is very windy.

Note: Have "picked out" new trench 13, next to T to west.

① Glass bead found in topsoil. Fractured but couldn't find the rest of it.

Photographs:

Context	Report
1.3	Below 1.2, coming to floor level of previous excavation. Little tumble, mainly loose brown soil. The baulk is only 60 cm wide. Bedrock was found in previous excavation in NW corner, so should not be far away.
*1	A bead frag (stone?) found in loose soil at 80 cm from corner surface (SW).
Z	Excavation in the corner has revealed a vertical worked stone in the perimeter wall, such as usually associated with doorway. But no other sign, so this probably put in to strengthen the wall. Proceeding east towards doorway, where a large stone (or is it bedrock?) seems to lie parallel to the wall - perhaps from the door? Pottery very tiny. Disturbed? Later: Yazi thinks this may be part of a sub-floor wall running N/S, in line with those in trenches to north & south.

Beginning in 99.

Context	Report
1.1	Removing topsoil from South bank of Area 98-99, section east of presumed doorway (= Area 99, the rooms open to each other)
1.2	Removing tumble from same. Tumble all resting in loose brown soil. E/W wall (4) north face now appearing. To floor level w. pavers
1.3.	New ^{10cm} spit below 1.2, i.e. below upper floor which carries the "pavers" will go to lower floor level, then excavate to bedrock in SE corner
* 1	Glass frag found in doorway 1.2
* 2	Coin found in clearing base of 1.2 - near wall at depth of 45 cm from surface at TBM
1.4	New spit below 1.3, i.e. only in doorway and east of it. Same content as 1.3. i.e. soft brown soil (not deliberate fill).
* 3	Glass frag. from doorway area in 1.4

Same tough soil in doorway area. Two large stones ex situ, north of doorway, now pedesballed - will measure when spit finished.

Context	Report
1.4	Spit below 1.3 in doorway and along E/W wall 4 in Area 99. The "pavers" are now pedestalled in the doorway. The doorway is clearer now - has obviously lost the doorstones (perhaps these ex situ in Area 98). A closer look at the "pavers" shows they are not flat stones but possibly door stones used as pavers for the higher, later floor. Very little pottery. This spit is going deeper than 1.3 but has the same loose brown soil, but here with some tumble coming up.
*1	Spindle wheel near doorway
*2*3	Bronze fragment & iron nail in wall corner.
*4	Spindle wheel (larger) found near first. Context unchanged. Now 50-60cm below upper floor with pavers.

1.5 Clearing last spit to bedrock, where patches of tough soil (floor) are found in bedrock hollows.

1.1 0332-3 -S and N

Context	Report
1.1	Clearing topsoil and small stones from surface of tumble. Wall line A still not certain, but possible. The northern face is clearer but to south it may be somewhat collapsed. The trench is full of tumble - no empty spaces. No levels taken today as we need a new BM. - BM 2 is too high & no, have raised legs.
1.2	After photograph, moved to locus 1.2, which is north of the presumed wall A. Removing a great deal of tumble: leaving one or two possible worked stones in place. Tumble is decreasing.

Context	Report
1.1A	This bank has remained in place since excavation of Areas 94/86 in 2002. Much vandalism has occurred e.g. the N/S "wall" between 94/86 has been destroyed. The removal of the bank will clarify the N/S wall 4 of Area 86 and the relationship between it and the installation in previous trench 75/1. We will also be looking for the existence of an intermediate floor level with the upper floor in 94 (which I suspect is not a floor. No floor apparent in bank (drawn in notebook). Bank is 90cm high at east 110cm high in centre.
1.1	is topsoil - thin layer above massive tumble. No pottery.
1.2	Below 1.1. All heavy tumble in loose brown soil.

A = E/W section of bank

B = N/S " " "

86/94 2.1	Line of slabs N/S (stylebate!) across 86/94 cleared. They are sitting on a floor just above bedrock. At South end, they meet the (now ruined) corner installation in 94 (prev. 75/4). 2.1 was just clearing the edges
94 W/bk	
1.1	Moved team to remove section of western bank in order to reveal doorway west. This might also clarify the upper floor in 94, which I now believe was not a floor - need a bank to see! There is a bank junction here with a N/S and E/W bank. We are excavating only the E/W section as far as the N/S wall (4) of 94 on the west, where the doorway is / may be. No pottery in 1.1
1.2	Tumble in loose brown soil. Some large worked stones

86/94 "stylebate"

Soil sample

Context	Report
1.2	No pottery, no bone
1.3	Ashy dark soil appearing over whole locus so have changed spits. Soil sample will be taken.
	The ashy soil is perhaps assoc. with the oven area excavated in 2002 at the foot of the steps. All pottery & bone from this spit.
	Doorway now cleared - width of 106cm.
	Stone A does belong but is ex situ - may have been the southern upright.
* 2	Glass fragment found near door
* 3	Iron bead (with bit of handle?) in black soil as indicated on plan.
	Floor levels not yet sorted - should I take down the N/S bank?
	A portion of slim, unfuted column projecting east from N/S wall 2. It seems to be

under the wall, in which case the wall is later than it.

Patches of tough floor apparent under the black soil

Context	Report
2.3	Continuing to work in the narrow locus 2. Removing now the "wall" in the west - as I suspected, not a wall. At the eastern end I am not sure - if it is a wall, it is only 1 course high & rather shabby. However, the one course puts it at the same floor level as Wall A. Will leave in place today.
1.7	Part of team now cutting through floor 1.6 to begin spit 1.7, below floor. Tough.
2.4	Having found a floor in 2.3 at depth of 116 cm from surface, Halima has already cut through it. We will leave eastern half in place and excavate deeper in 2.4. No pottery from 2.3?

(NB Some 2.4 pottery may include 2.3?).

1.7 N/S wall appearing in E bank! ~~will~~ will chip back 2-3 cms to clear back.

Context	Report
3.1	Beginning to excavate a metre-wide strip across the "floor" left higher in west of Area 94. This had several worked blocks on it but also in it so I've not been convinced it's a floor. However the soil now being excavated is very tough which could now be from exposure to the weather post-02 excavations. (Note also
3.2	28/5/06. Yesterday, at end of day, bedrock found at west of sondage. In "bank", one floor visible just on top of this, a slightly higher one (8 cm) under the fallen column. I conclude that these were the only floors - used when styobate & installations were built. Higher floor non-existent.

Cleared to bedrock & photographed.

 Feature A, 0637 → 0638 → S

Soil sample from 1.8, F.A.

Context	Report
1.8	Below 1.7 in narrow E/W spit below 1.6 floor. A small ash deposit in a circular mud structure (not an oven?) found in the SW corner of locus 1. No floor seems to be associated with it. The locus is extended a few cm to east because at the end of yesterday an N/S wall appeared just in the east baulk. This has now been scraped back. It is not yet clear (to me!) whether Wall A has finished (as it did in adjacent T7) on the 1.6 floor. Yes, now clear that it <u>did</u> at floor 1.6. Contents brown soil mixed with limestone chips & small stones.
2.3-4	Photographed - see above. Will have to go down further here, which will entail cutting out more of floor 2.3. Can see white line of floor level, which is <u>above</u> possible primary wall D (N/S). (30 cm below white line of upper floor which is 65 cm from surface.
