ANAS

Field Record Book

Name.....	BRUCE ANLARDICE
Trenches.....	22,
Dates.....	27-4-08 →

ADVICE to TRENCH SUPERVISORS

1. Take a **new page** for each day. (Each day may take several pages).
2. Draw a **scale plan** of the trench **each day** on the graph paper (essential), with North at the top (if this is not convenient, mark North direction clearly).
When starting a square, this plan may be nearly empty but draw it all the same and mark in emerging tumble. The graph paper can also be used for sketching objects etc.
3. Mark **depth** from surface at the beginning of each day, at designated points. Also record, each day, the depths taken on the sheet provided (kept in the back of your field record book)
4. Draw arrows on your plan to indicate **direction** in which you are excavating.
4. Every time you designate a new context, (on the occasion of a new spit, a new feature, a new soil colour) fill in the **Context Record Sheet** for that trench, as well as describing it in your report. Store the accumulated context record sheets in the plastic sleeve in your record book.
5. **Structures** . Measure carefully any structure (wall, doorway, threshold, ovens, pit, any large dressed stones or columns) and record exact location, height, width in your report as well as on the scale plan.
6. **Floors** - marked by very hard tough surface or layer of white crushed limestone. May be softer adjacent to wall. Record thickness of floor, if we decide to dig through it.
If your floor is particularly good, collect a few bags of surface material - there may be seeds.
7. **Objects**. e.g. glass, figurine or lamp fragments, metal, stucco, loomweights, spindle whorls, beads, graffito-ed sherds, coins, gold jewellery (some hope). Mark in the location and depth of any objects clearly and accurately. If necessary, draw another sketch plan as the day progresses. A quick sketch of the object in the report would be helpful, if it is too mysterious to name e.g. Mattie's metal blobs.
8. **Pottery**: label bags clearly in waterproof pen, with one label inside the bag and one outside. Record daily the number of bags per context . Be very careful to separate pottery from different contexts.
It is absolutely essential to double-bag the pottery. A broken bag of pottery without context is useless.
9. **Bone**: Collect all bone and label as for pottery. Record number of bags per context daily.
10. **Charcoal**: Collect all charcoal and label as for pottery. Record number of bags per context daily.
11. **Tile**: it is important to record the location and amount of tile.
12. **Very important**: at the completion of a trench,
 - i DRAW (TO SCALE) a section of the exposed baulk, with details of stratigraphy clearly marked.
 - ii DRAW (TO SCALE) a top plan of the completed trench, with contexts clearly marked.
 - iii WRITE a short summary with your interpretation of the trench.

List of equipment for Trench Supervisors

- Dig bag
- Water
- Clip board and spare clips for windy days
- Pens (water proof only - black or blue), pencils, ruler, eraser
- Measuring tape
- Plumb bob
- String
- Spirit level (may be shared)
- Supply of labels
- Supply of different-sized plastic bags
- Toilet paper (for wrapping delicate objects as well as for personal use!)
- Small cartons/boxes for objects. When available
- Band-aids and aspirin for the vapours (yours or the workers')

OTHER

Context Report

1.3	Began to clear in 10cm layer. Soil light grey, barren of finds - color. Seemingly exposing nothing yet. Fine to coarse grains. Soil becoming light brown. GPIT 3 in its confined SW corner provided no evidence of separate room. It has been incorporated back into the whole. Clearing continues to NE. Tumble, perhaps from upper floor(s) of T15.
2.3	A separate Locus has been opened in NE corner to identify a wall continuing from S from T15. Densy light grey soil; few clods
ⓑ	Small stone ball with 2 holes on the other side ⓐ another hole found ≈ 106 cm above floor in T15 which should follow through to T22.2.2
Ⓐ	loom weight clay
ⓐ	Small frag GLASS
	Now down to floor level, a 68cm below surface @ N & c. 40cm below surface @ S. It is an uneven floor

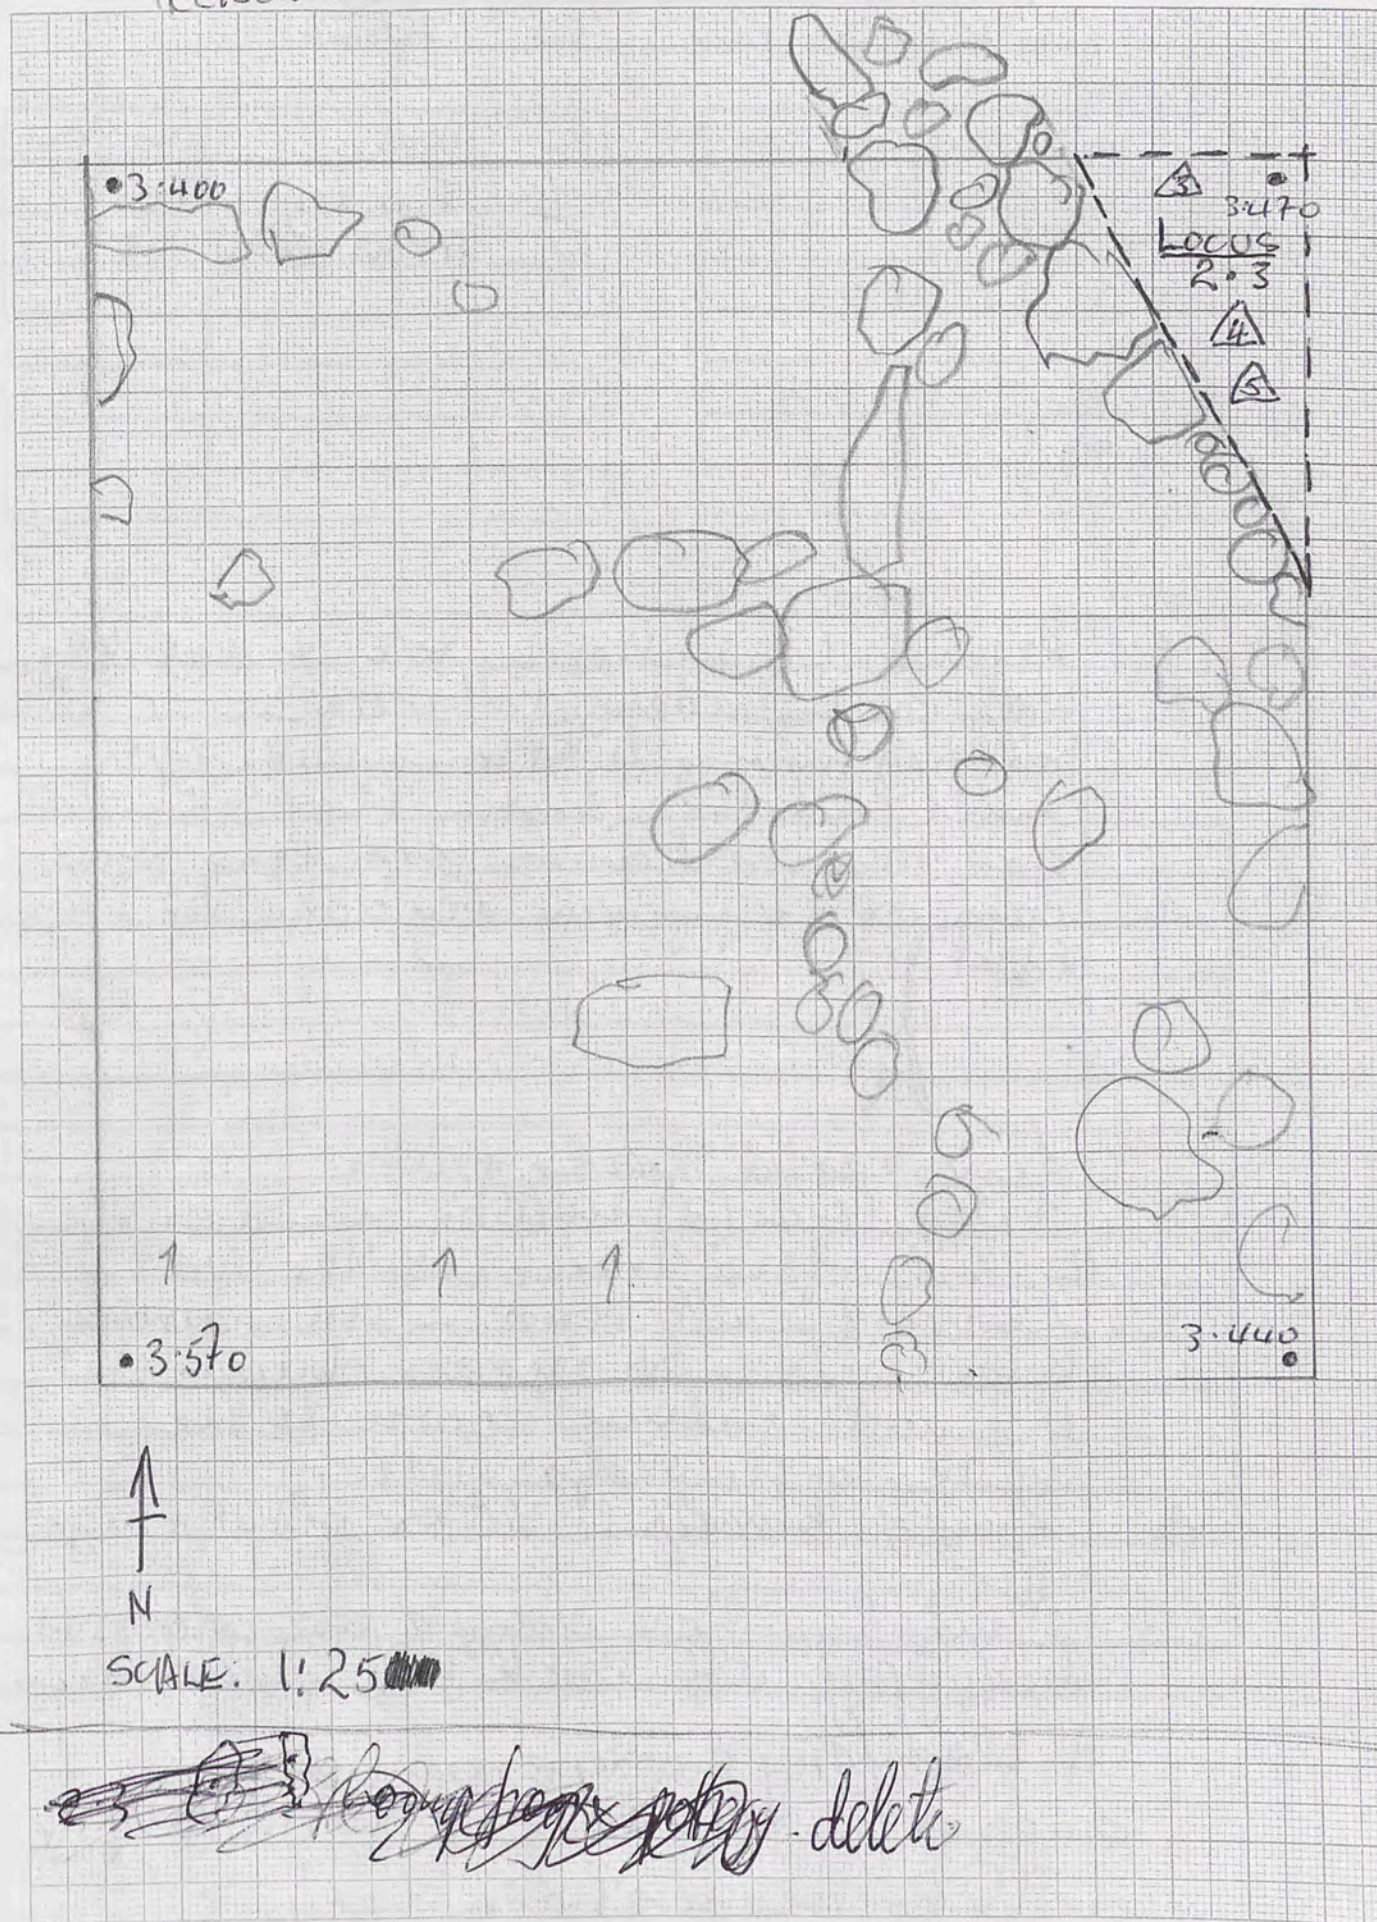

Tomorrow, clean, photograph & draw:

Ⓐ lined rim of intense green glass bowl

ⓐ found in pottery shards

2.3 -  Fig frag x pottery.  Lamp frag x pottery

Context Report

1.3	Resumed L1.3 clearing to E to meet the wall on boundary of Locus 2. Soil grey turning light brown with depth lined sherds indicating that this fill has been laid down for a long time.
△	Fragment of a figurine leg broken at knee & foot 
	Lime coated sherds & rocks. A New locus (3) will be opened on the E. side of the trench to the wall. Locus 1 will remain unexcavated below spit 3. It appears obvious that L. 1 will continue down to the level of the plane floor.
△	Lump of beautiful yellow glass & frogs
1.3	Wind & Sun have changed soil colour to dusky grey with rock fill inclusions

A black/grey sooty area has been exposed in N. adjacent to wall, but will be excavated in locus 3 tomorrow.

ASH

Context Report
 3.4. Begon to clear spit 4, in new locus 3 (see plan). Ash deposit in Nth sampled & level taken (3.615 - 3.630) [back night 3.350]. Soil on surface grey dust; below light brown.
 A small fragment of silvery glass & sewing
 B " metal fitting
 Excavating to floor extension of T15 soil grey to brown
 3.5. 14 cm down to floor from L3.4. Immediately above the floor is a layer of unconsolidated small stones as if a new floor level was being prepared. There is no evidence of a floor above the one below 3.5, however. It does appear that the well was constructed on top of level 3.4, i.e. the layer of small stones. Perhaps the floors in L2 are indicative of what might have been planned in locus 3

<u>16</u>	<u>Patrifid shell (no lease)</u>	<u>1.2</u>	

Context	Report
1.2	Clearing in front (S) of wall. Few sherds, grinding stone. Soil light brown. (for pounder)
10.00am	still clearing + rubble & fill S of wall, which is emerging.
	▲ Patrifid shell
	Soil during light tan/brown. Still rubble & fill, few sherds, 2 amph toes
11.30am	Along with some bones appeared a goat horn (according to the locals).
	But S well may indicate earth tremor. It seems that the well crosses the N central sector in 2 parts; on inner & on outer wall which parallels the walls in the trench to the W. Checking all the trenches on the N side of the STDA complex, confirms this pattern all the way to the N-S road to the W. of the STDA Complex.

Context Report

1.4 Continued to clear 1.4 to just above floor at E end of locus. The floor discovered yesterday in the NW corner of the locus 1.4 is now being used to fix as the focus for tracing the floor across the spit. It is, as mentioned quite uneven  and at this point is shaped like a radiating cone. As it becomes exposed, it steps in some places. More detail will be drawn on completion. Bone continues to be exposed in this area. The floor is very uneven - undulating - so as to dig under, fall steeply to S. Some small rock debris in NE. Still difficult to determine floor level. Having completed a pass to E wall, I helped the loces to create L 2.5. W of E wall (including wall) & up to the floor in W. This locus has a high cone floor (see above) which dips to the South wall but stops & disappears at the W. end of locus 2.5.

Context Report

1.1 Beginning to define walls this am. N-E-W wall at W appears to cross the N-S wall rather than abut it.

The trench is being extended to N & NE to determine the width of the N, E-W wall as well as determining if the E-W wall extends beyond the N-S wall.

Clearing spoil to wall level.

The E-W wall has now been articulated & there is a large upright stone in the W bank perhaps indicating a door jamb. There is also clear evidence that the N-S wall continues on to the NW toward the cone. It appears that the E-W wall may continue to the E.
