ADVICE to TRENCH SUPERVISORS

1. Take a **new page** for each day. (Each day may take several pages).
2. Draw a **scale plan** of the trench **each day** on the graph paper (essential), with North at the top (if this is not convenient, mark North direction clearly).
When starting a square, this plan may be nearly empty but draw it all the same and mark in emerging tumble. The graph paper can also be used for sketching objects etc.
3. Mark **depth** from surface at the beginning of each day, at designated points. Also record, each day, the depths taken on the sheet provided (kept in the back of your field record book)
4. Draw arrows on your plan to indicate **direction** in which you are excavating.
4. Every time you designate a new context, (on the occasion of a new spit, a new feature, a new soil colour) fill in the **Context Record Sheet** for that trench, as well as describing it in your report. Store the accumulated context record sheets in the plastic sleeve in your record book.
5. **Structures** . Measure carefully any structure (wall, doorway, threshold, ovens, pit, any large dressed stones or columns) and record exact location, height, width in your report as well as on the scale plan.
6. **Floors** - marked by very hard tough surface or layer of white crushed limestone. May be softer adjacent to wall. Record thickness of floor, if we decide to dig through it.
If your floor is particularly good, collect a few bags of surface material - there may be seeds.
7. **Objects**. e.g. glass, figurine or lamp fragments, metal, stucco, loomweights, spindle whorls, beads, graffito-ed sherds, coins, gold jewellery (some hope). Mark in the location and depth of any objects clearly and accurately. If necessary, draw another sketch plan as the day progresses. A quick sketch of the object in the report would be helpful, if it is too mysterious to name e.g. Mattie's metal blobs.
8. **Pottery**: label bags clearly in waterproof pen, with one label inside the bag and one outside. **Record daily the number of bags per context** . Be very careful to separate pottery from different contexts.
It is absolutely essential to double-bag the pottery. A broken bag of pottery without context is useless.
9. **Bone**: Collect all bone and label as for pottery. Record number of bags per context daily.
10. **Charcoal**: Collect all charcoal and label as for pottery. Record number of bags per context daily.
11. **Tile**: it is important to record the location and amount of tile.
12. **Very important**: at the completion of a trench,
 - i DRAW (TO SCALE) a section of the exposed baulk, with details of stratigraphy clearly marked.
 - ii DRAW (TO SCALE) a top plan of the completed trench, with contexts clearly marked.
 - iii WRITE a short summary with your interpretation of the trench.

List of equipment for Trench Supervisors

- Dig bag
- Water
- Clip board and spare clips for windy days
- Pens (water proof only - black or blue), pencils, ruler, eraser
- Measuring tape
- Plumb bob
- String
- Spirit level (may be shared)
- Supply of labels
- Supply of different-sized plastic bags
- Toilet paper (for wrapping delicate objects as well as for personal use!)
- Small cartons/boxes for objects. When available
- Band-aids and aspirin for the vapours (yours or the workers')

5	bead surface find		
6	basalt wine press 2.4	left	in

Context	Report
2.3	Continued leveling towards possible floor. Few rocks/stones, mostly fine fill. Tumble emerging. No sign of floor yet - perhaps under stones?
2.4	15.5.08 Eastern spoil heap along E bank removed by ± 40 cm along length of bank. Surface find 5. A large square-ish rock, perhaps washed, has emerged in 2.4. Approaching the level of the floor in T from 06 - no floor in sight - snake's eggs x 5. Rat in Squarish rock a. dimensions See graph for location + drawing of basalt wine press (b) that emerged from the soft fill + tumble. This surface is extremely uneven + not at all conducive of taking levels yet, today. The large rock (a) 67 x 70 will be removed. It raises the issue of the location of the structure from which it came. Stones at the N end of the NS (mid) wall may need to be removed as they stand upon a softish 'ashy' glob that came away very easily + partly undercut the wall + obviously a third (at least) phase wall. A 70 x 80 floor was left in situ at SE corner
