ADVICE TO TRENCH SUPERVISORS

1. Take a new page for each day. (Each day may take several pages).
2. Draw a scale plan of the trench each day on the graph paper (essential), with North at the top (if this is not convenient, mark North direction clearly).
When starting a square, this plan may be nearly empty but draw it all the same and mark in emerging tumble. The graph paper can also be used for sketching objects etc.
3. Mark depth from surface at the beginning of each day, at designated points. Also record, each day, the depths taken on the sheet provided (kept in the back of your field record book)
4. Draw arrows on your plan to indicate direction in which you are excavating.
4. Every time you designate a new context, (on the occasion of a new spit, a new feature, a new soil colour) fill in the **Context Record Sheet** for that trench, as well as describing it in your report. Store the accumulated context record sheets in the plastic sleeve in your record book.
5. **Structures**. Measure carefully any structure (wall, doorway, threshold, ovens, pit, any large dressed stones or columns) and record exact location, height, width in your report as well as on the scale plan.
6. **Floors** - marked by very hard tough surface or layer of white crushed limestone. May be softer adjacent to wall. Record thickness of floor, if we decide to dig through it.
If your floor is particularly good, collect a few bags of surface material - there may be seeds.
7. **Objects**. e.g. glass, figurine or lamp fragments, metal, stucco, loomweights, spindle whorls, beads, graffiti-ed sherds, coins, gold jewellery (some hope). Mark in the location and depth of any objects clearly and accurately. If necessary, draw another sketch plan as the day progresses. A quick sketch of the object in the report would be helpful, if it is too mysterious to name e.g. Mattie's metal blobs.
8. **Pottery**: label bags clearly in waterproof pen, with one label inside the bag and one outside. **Record daily the number of bags per context**. Be very careful to separate pottery from different contexts.
It is absolutely essential to double-bag the pottery. A broken bag of pottery without context is useless.
9. **Bone**: Collect all bone and label as for pottery. Record number of bags per context daily.
10. **Charcoal**: Collect all charcoal and label as for pottery. Record number of bags per context daily.
11. **Tile**: it is important to record the location and amount of tile.
12. **Very important**: at the completion of a trench,
 - DRAW (TO SCALE) a section of the exposed baulk, with details of stratigraphy clearly marked.
 - DRAW (TO SCALE) a top plan of the completed trench, with contexts clearly marked.
 - WRITE a short summary with your interpretation of the trench.

List of equipment for Trench Supervisors

Dig bag
Water
Field record book
Clipboard and spare clips for windy days
Pens, waterproof, black or blue
Pencils, ruler, eraser
Measuring tape
Plumb bob
String
Nails
Spirit level (may be shared)
Supply of labels
Supply of different sized plastic bags
Small boxes for objects
Toilet paper – for wrapping delicate objects as well as for personal use!
Bandaids and aspirin for the vapours (yours or the workers')

- 26/4 Context Report
- 1.1 x cloudy, weinrich, grey/brown soil.
Began bulk clearance from 2 points (see Plan p3). Little pottery shards. Dry soil, friable,
 - x Exposed top of N-S wall between T2 & T5. To E of wall (ie. T5 side) c. 50cm of remaining fill to remove
 - x E-W wall bulk between T9 & T5 = fill & spill with N face of wall exposed in T9 appearing as S. face of bulk.
 - x Soil continues to be greyish fill & spill.
 - x Pottery in E-W bulk, almost none in N-S wall/bulk.
Soil colour turning mid-brown (damp?) which leaves grey after exposure (dry).
 - x Tumble continues!! rocky soil.

Context	Report
1.1	Resumed clearing from pot find → West to well. Some bone, sherd(s), quite a few. Soil grey/brown. Against W. well, small ashly deposit - not enough to collect but present with long pot shard.
F1	Further scraping has revealed in SW corner of walls a mud formed structure c. 40x30 cm & 8 cm deep. Along side this, and against the N-S wall are a series of depressions & v. small charcoal frags. Floor completed to W. wall. Crushed pottery being collected in separate bag(s). Complete clearance to floor in this spot.
Pics: 498-499	A reflection on the W. wall depressions: feels like several small pots were resting in these depressions - they are (on E. side) smooth & rounded.

- Context Report
- 112 completed SE end of spit 2 early
 Still, clear, pottery in store.
 began Spit 3 of Loc 1 from E Reading (1)
 level one for end of spit 2 / begin spit 3.
- A Glass frog came up above (just) the pottery
 crush #2. Soil cleared to reveal the ?
 on page 8 Plan, another spread of
 crushed pottery. Cleared photographed &
 removed in separate bag (Pot Crush #2).
 Good Piece of Sig A with rim in cache.
 : > 250 BC.
- 540-541 Working slowly to N of this pottery, could see
 more pottery lying under rock spill.
 This is definitely a floor at end of spit
 will get levels. Only 3 sherds emerged
 which look the same as the pot crush #2
 & have been broken in three.
 Cleared through standing stone - rubble
 so dangerous to dig in short term, so left it since
 E-W Wall ends. 30cm inside standing stone [A]
- 542-3 * Pies on completion.

- Context Report Still, clear, hazy across the river.
- 10.3 Almost immediately through dark brown floor at end 10.2, we come to another floor c. 20cm lower down. Some shards & bone in this a pit. We are moving S in spit from cut rock → hole (seen?) which because of the ash deposit, we will sample.
- Pics 658-659 After filling ash bag for analysis, this is an ash pit (so far) rather than even. This pit is 400 mm N of the E1 5th wall. Pic taken 671-672. Ash pit does appear to have been dug from top of 10.3 bottom of 10.2. Pic 679 W at the bottom of 10.3 -
- 10.4 Another floor seen below 10.3! Some bone & pottery. Saw screen / bit rusty / damp brown @ N. Pics to take 689 end of 10.4

Context Report

10.5 began 10.5 @ N by large stones \Rightarrow Stn.
 Large gap opened up under W end of E stone.
 Soil light brown turning to grey on exposure
 Ashy layer exposed in W bank of this trench
 or could be silt - very light grey.
 Bone & Pottery
 c. 50m below end of 10.4, another
 prepared a bone under the W end of
 the E (larger) of the 2 stones in N.
 Maybe part of the step, but the upper
 larger stone is not resting on it.
 This is what we have dug through another
 floor. Will clear to French drain & back.
 Hint of Ash Pit at floor level.

Pic. 716S/717N. 2 levels taken of both
 levels. Floor very rough & hard - limestone
 chips, dark brown soil.

10.6 Taking the level of N through to S wall and
 see what next! Bone, Pottery & few tile
 frags.

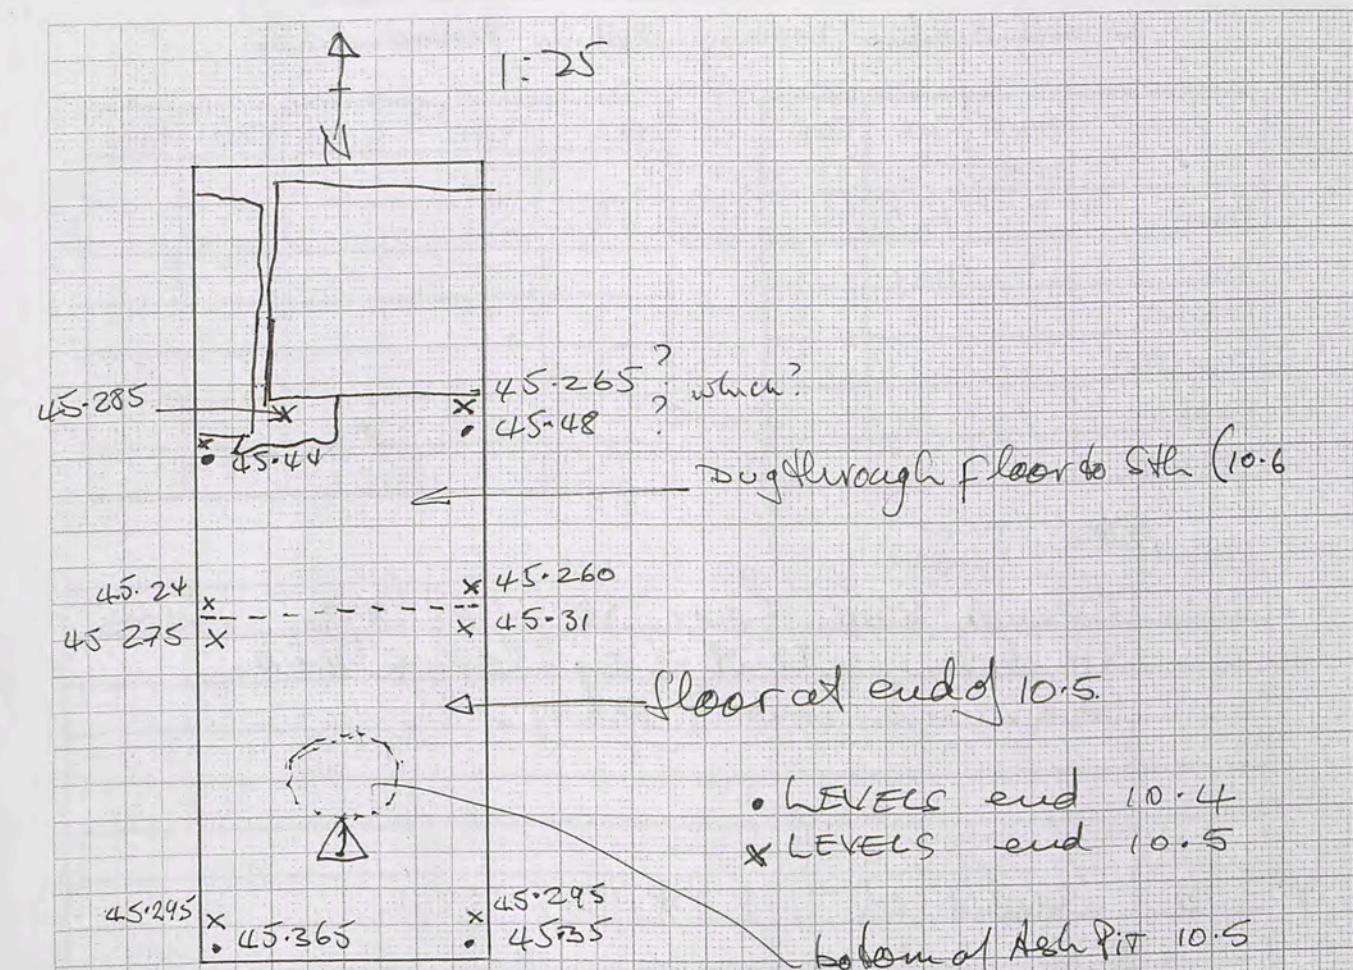

A Metal plated with circle at top & knot at bottom

See pg 31 [Pottery with cast label could be 10.6 No its 10.2.
 & FIG FRAG in some pottery could also be 10.6 / 10.2]

- Context Report
- 2.2 Grey brown soil as we work W
 ① Game top, flat on base without hole.
 Patterned base.
- 2 Metal frog
 after 20cm floor was reached W of the door which ran out towards the W wall & seemed to be close in front of the door. Neither of those areas were dug through, the hard floor disappeared (water action perhaps). Will clean & photograph & change a spit.
- 386/7/8
 Looking W at the wall, it seems that the quality is beginning to improve from what looks like spilt to courses of stone, some 80cm below surface.
- 2.3 the Plinth thickness of the door is 150-180mm
 Feature thick, at level of the bottom of the plinths.
 A At the NW corner of Loc 2.3 a large cache of round/oval pebbles was dug from a hole flat

230 mm
 Dia 60 mm
 x 190 mm deep measured from under plinth stone,
 coin ③ was sitting on top of these stones

Context	Report
2.3	Finished clearing floor at end of 2.3 clean & photograph; level & remove! PIC 948 w.
Feature	3. When floor cleared Feature 2 appeared - low depression in floor with a small circle c 30-40cm deep.
2.4	Wall E-W x 10' on this level Neither is NS wall
2.4	Beginning at E end to strip 10-20cm defined the next floor - if it is a mirror of Loc 1. Soil is lumpy but friable grey/brown. The NS wall on W could appear to have been built first & the central E-W wall abuts - it is not 'keyed' into it. After 20cm or so, another "floor", soft at W end & a small shallow ash pit just inside the door to the W is spreading inside & W of the door. Bone & a few shards - bone bagged, Ash bagged. This "floor" has turned into a soft layer above something else. We (Howard & I) have agreed this was not a floor! Clearing back to W wall in loc 2.4

A small hole developed under the floor
beside the ash pit & in front of the door. 15cm deep
& 25cm at its widest. From the back (under floor) to front it is
15cm. P

Context	Report
1.1	Continue to clear surface rock spill & fill
= 1.2	Broken Grind stone came up in tumble 18 cm. 7cm base. 
	Pigment pieces (2) green/turquoise to H. These were found right at the top of the N bank just under the surface grey soil.
	Looks like a fallen (?) doorway in the middle of the trench  360mm on an angle NW-SE.
	There seems to be a wall materializing E-W in the S sector of the N face of which is c. 160 N of the S bank. This ? wall? does not match any wall in the trench to the W. & the W wall in T. 49 seems not to continue into this trench.
	Still removing v. large rocks including the one mentioned above. The E-W wall in S takes slope but the predominant activity is large rock removal. Quite sterile c exception of light limy pottery finds. The E-W wall in S has been exposed on its N face, now.

5	Cumpl of metal	1.2	- iron grey.

Context

Report Soil grey, silty, dusty & d. rocky.

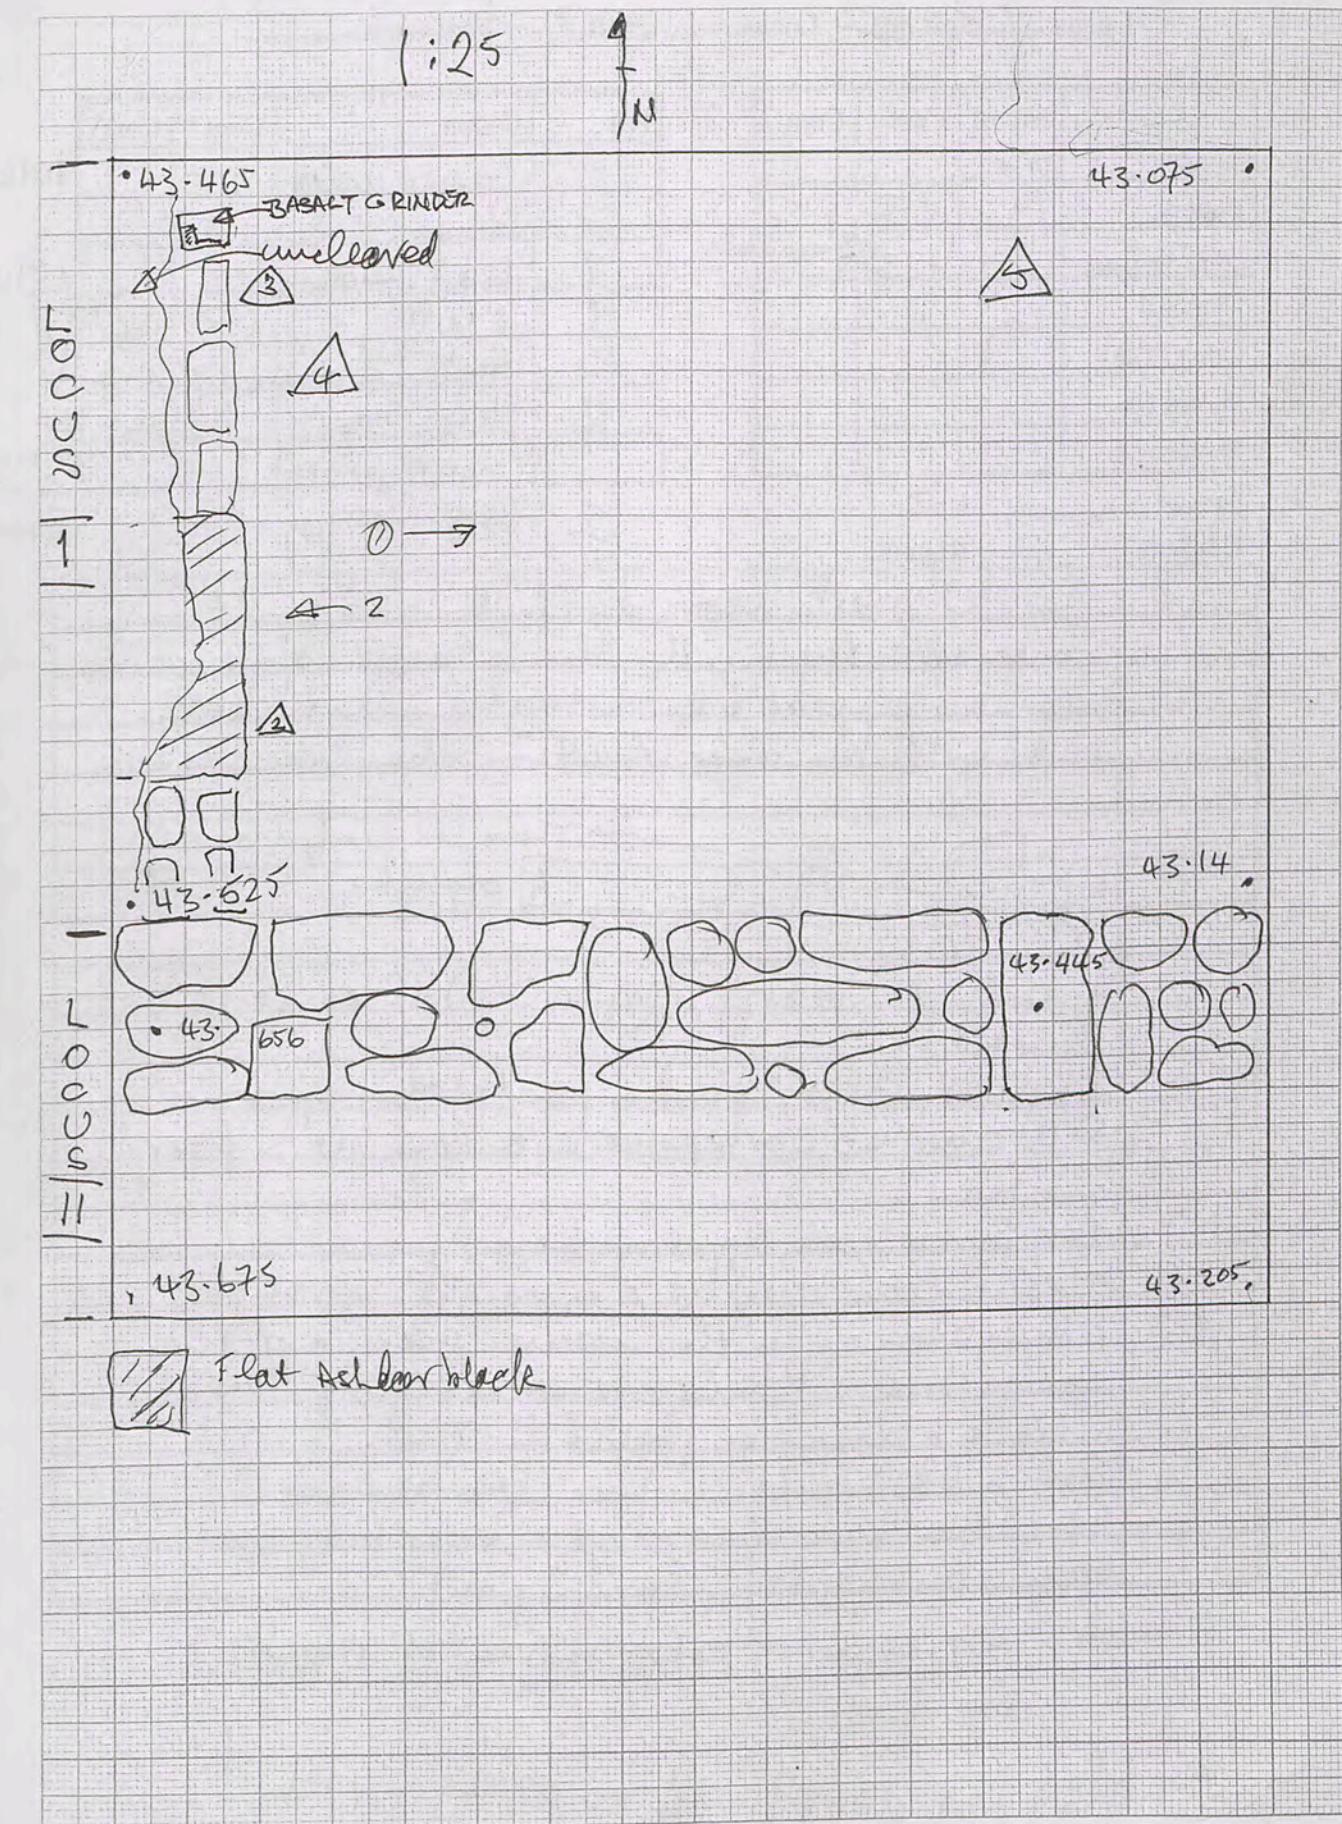

1.2. With the appearance of the E-W wall in S, I have created loc 2 → Wall + area to S of wall. 1.2 is on arbitrary spit since it is the same soil, content & condition as 1.1. In W bank a large flat stone protrudes; maybe a threshold? It is now clearly defined & perhaps the large block mentioned on p. 69 & is a fallen door jamb from this block in the W. bank.
 Basalt Grinder

The plinth seems now to be part of a N-S wall in the/adjacent to the W. bank

Context	Report
1.2	Continued clearing E in N sector. Large rock, spill, tumble, ESA shards still coming up. Soil silty, fine grey & shards lining. Huge amount of soil, rocks & large rocks coming out of this space. On the N wall we are down c. 1m & no change in fill, spill, soil colour or lining shards. On the S wall we are down c. 25cm & plan to take levels when this space is complete.
	Took levels & continued removing stones & large rocks from W wall to E. One very large tile frag - maybe 1/4 of a tile.

Context Report

1.3 Floor, feature,

When cleaned for pic the 'possible feature' on p. 12, turned out to be a wall. The trench was bisected & a 2nd loci was opened on the (W) side beside the new wall.

2.4 → See pg 15.

see pg 15

1.6 See p. 12.

1.7

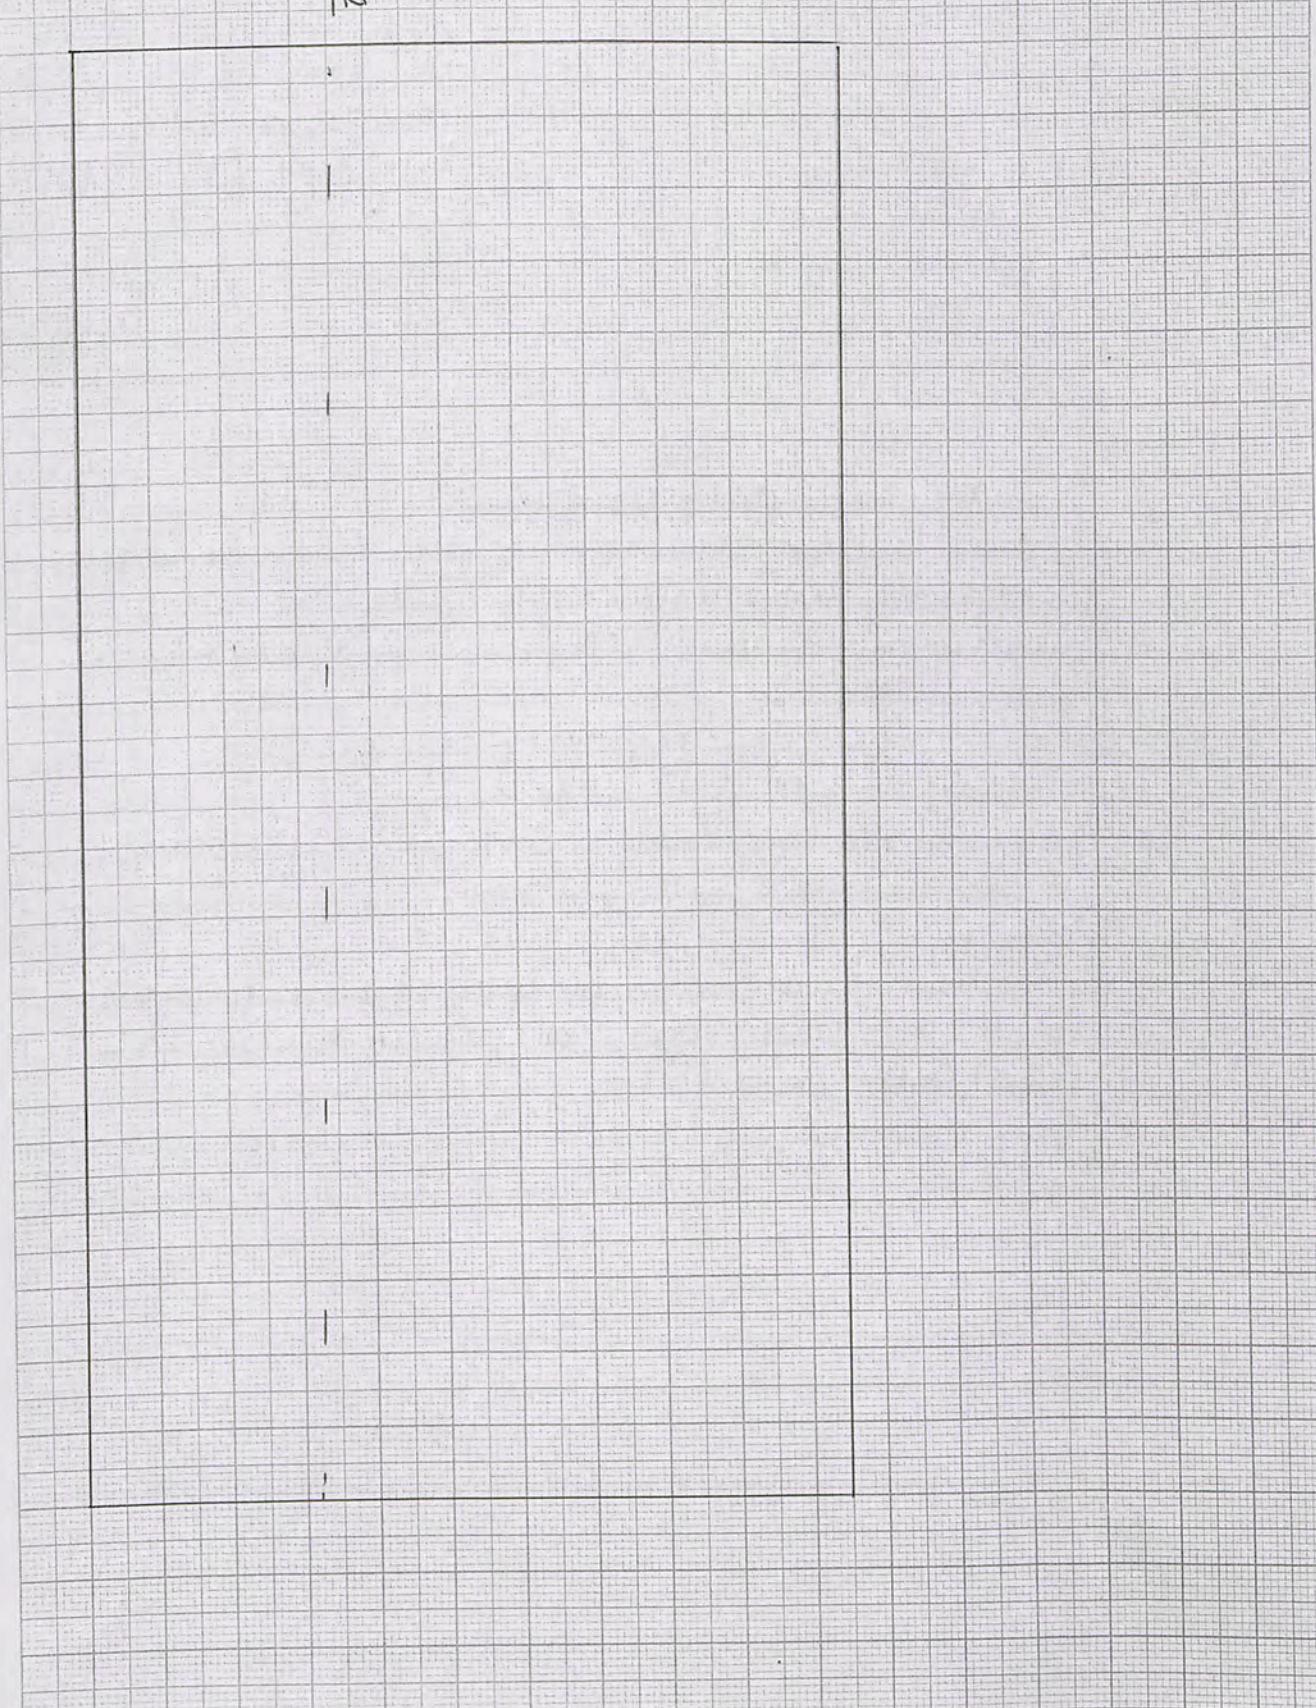

This new 'feature' proved to be a full length N-S wall. The 'dip' in the floor (plan p. 12) may indicate a missed floor - it may also be an uneven floor. I think it is uneven rather than a different floor.

Context	Report
2.1	The new locus alongside the W wall is dark brown soil, easy to dig, & dark probably because the day is cooler & overcast. Down to a new wall in S to match the new wall in E.
18/19/20	all come up adjacent to one another charcoal frags. (CF) logged. Soil is clay & easy to dig - feels a bit damp. Has become deeper with new pass. Summary: We have two inner walls & an outer wall on W & S side. Floor level was just on top of the inner (older) wall

Context	Report
2.1	After 30 mins, we hit Label! the inner W. wall is sitting on label but the label has been levelled on the inside of the well:-
	
	We have cleared the rock spill in N to get a clean profile of label & W. wall & will clean & photograph, level & open 3.1 on N of 2nd Sth wall.
	Small piece of basalt grinds bone found in rock spill at N of 2.1 at floor level.
23	Stone Spindle Whorl at floor level (c.) on small inner wall
	PICT 1301-1302 SW
	The inner W. wall is quite separate from the outer - maybe a gap of c. 2-4 cm / the inner S wall is abutting the inner W wall & is of a far lesser quality it seems. There appears to be more mud mortar in the S wall
3.1	Going down 10 cm at a time looking for lower floor. Small piece of worked basalt in tough, lumpy soil

Context	Report
10.10	Re-opened T37 to see if Label had been found. Clearing was after 2 years of nothing. Have found (re-established) floor in original trench & drain running N/S through it. Have re-opened opening near Locus 10 of this Locus (10) to look for door jamb 40N of exposed jamb in Loc 10 W back wall. Digging to old floor level in S, excavated in 2008. Soil is grey, leathery, lumpy with some rock spills. Right on the NW corner of 11.1, the N door jamb appears. Distance between the 2 is 1.5 mtrs. We have reached the floor exposed in 2008 (?) on E side of Loc 10.
11.1	Door c. 10cm & stopped. Went further, but also stopped before Label. 10.1 unexcavated further - i.e. cleared, cleaned at floor level of 2008 & taken no further. PIC 1560.
11.2	

Was this was a floor, not Label → TBD 2011?

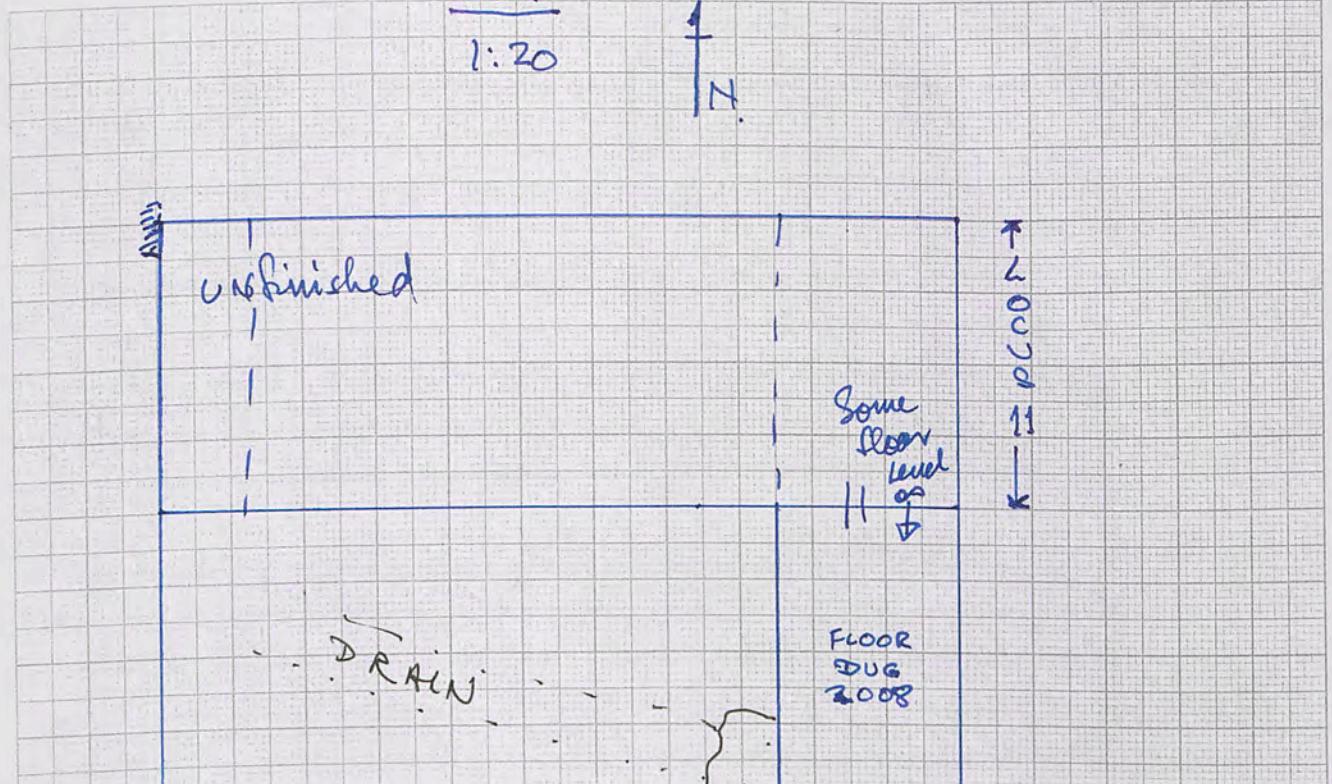

Levels not taken → excavation unfinished in Locus 11 (#10)
